

Group classifications based on significant deviations from the mean

Public Value Atlas 2014

Ranking list of organizations with error intervals

Reference: Only when the error interval of two organizations (horizontal line) does not overlap, can we presume with 99.9% certainty that they actually have a different value.

Group classification

Reference: The first group (top group, the role models) includes all organizations with a significant positive deviation from the mean's confidence interval (4.2671). The second group (middle field, the new hopes) includes all organizations without significant deviations from the mean's confidence interval. The third group (bottom group, the challenged) is formed by companies with a significant negative deviation from the mean.
